

## THE US NEWS AND WORLD REPORT RANKINGS WITHOUT THE CLUTTER

By J. Gordon Hylton, Marquette University

The only categories that should matter in law school rankings are the quality of the students and the quality of the faculty. In the US News & World Report rankings these concepts are best, though imperfectly, captured by the categories “Peer Assessment” (a ranking of law schools by law faculty) and LSAT score (a reasonable accurate measure of student ability). All the other categories are clutter and too ambiguous. Grade point average depends on undergraduate institution and major; assessment by lawyers and judges is usually just blind guessing; acceptance rates are a function of the applicant pool and subject to manipulation; employment statistics are affected by local and regional market conditions; and bar passage rates are a function of how rigorously the exam is graded and the composition of the pool of bar takers. Peer assessment tells us what other law professors think about individual law schools; LSAT scores tell us what students think about the school.

I have recalculated the US News and World Report Ratings using the “2007” data (actually compiled in 2005) for my two categories. To obtain a single number for ranking purposes I combine the US News Peer Assessment Score times 10 with the mean of the 25<sup>th</sup> and 75<sup>th</sup> LSAT percentiles minus 130. These adjustments produce a number between 10 and 40 for both categories.

For example, Yale Law School, the highest ranked school in the US News rankings has a Peer Assessment score of 4.9 which converts to 49. Its 25% and 75% LSAT scores are 168 and 175 which average 171.5. 171.5 minus 130 equals 41.5 which is then added to the Peer Assessment score for a total of 90.5 out of a possible 100. Deducting 130 from the LSAT score actually converts the score into a meaningful number. LSDAS and ABA data suggest that virtually no one gets into law school with an LSAT score below 140, hence the real range is a 40 point range (180-140).

I would prefer a better index of peer assessment than the US News’ practice of surveying the five most recently tenured professors at each law school, but this is all we have at the moment. Since few law schools admit students solely on the basis of LSAT score, I am confident that LSAT score is a valid indication of general student abilities. For Louisiana law schools, I have used the US News data which, due to Hurricane Katrina, had to be derived from an earlier year.

Below are the uncluttered rankings and composite scores of all 178 law schools listed in the US News rankings.
